Marzieh Kazemi

Front-End Developer | React.js & Next.js

I'm a passionate front-end developer with a degree in computer engineering, specializing in software engineering. I am eager to deepen my knowledge through hands-on experience. I am particularly interested in software development and related technologies and continuously strive to stay updated in this fast-evolving field.

SKILLS

Programming Languages:
JavaScript, TypeScript, HTML5, CSS3, Sass

Frameworks:
Next.js

Libraries:
React.js, React Query, React Hook Form, Axios, React Router, ECharts, Swiper

UI Libraries:
Tailwind CSS, Material UI, Ant Design, Bootstrap, React Bootstrap

Version Control:
Git, GitHub, GitLab

Other Skills:
RESTful API, Responsive Design, SEO

WORK EXPERIENCE

Front-End Developer → MonacSoft

France – Remote | June 2025 – Present

- **Developed the Concicolis System**: A multi-panel platform for managing and organizing buildings, consisting of 3 separate management panels (Super Admin, Building/Concierge, and Resident).

Achievements

- **Streamlined role-based access control** by building an intuitive permissions UI, letting admins manage user access without engineering involvement
- **Automated parcel tracking end-to-end** with a QR-based workflow, giving concierge staff real-time visibility into package status across an entire building
- **Cut resident-onboarding effort** by building dynamic multi-step forms with conditional fields and schema-based validation (React Hook Form + Zod)
- **Enabled self-serve subscription management** for admins by building a dynamic plan-creation UI supporting custom pricing and discounts across customer segments
- **Made large datasets manageable** for residents, parcels, and plans with searchable, paginated tables (TanStack Table)
- **Reduced manual resident communication** by building a bulk-notification feature tied to parcel status
- **Eliminated recurring type-mismatch bugs** by resolving TypeScript/Zod inference issues across shared form components

Technologies used

React 19, Next.js 16, TypeScript, React Hook Form, Zod, TanStack Query/Table, Tailwind CSS, Axios

Front-End Developer → Pishro Net Energy https://www.pnete.com

Tehran – Tehran | Apr 2024 – June 2025

- **Developed the Matna System**: An online platform for equipment maintenance and repair management.

Achievements

- Created **complex logic compatible with hardware**.
- Utilized **React Query** for data fetching, sending, and caching capabilities.
- Displayed **real-time data** on hardware pages and system status monitoring.
- Added **multilingual (i18n) support** and light/dark mode functionality.
- Implemented and customized **charts using ECharts** to visualize data.
- Implemented **responsive design** with Tailwind and CSS.
- Used **React Router** for routing and query parameter management.
- Implemented **complex forms with state management and validation**.
- Implemented complex elements according to **Figma designs**.
- Used env variables for **dynamic builds** and added **CI/CD** files.
- Optimized components and the project.
- Familiarity with **Design Patterns** and software design principles.

Technologies used

React.js, TypeScript, React Query, PWA, Tailwind CSS, Ant Design, Axios, React Router, ECharts, i18next

- **Developed website for Pishro Net Energy**, a knowledge-based company (www.pnete.com) — implemented SSR using Next.js 15; built the site to introduce products and services with a responsive, multilingual, professional, SEO
- **Developed website for Pars System Energy**, a knowledge-based company (www.pseco.net) — implemented SSR using Next.js 15; built the site to explain industrial services with a responsive, multilingual, professional, SEO

Technologies used

React, TypeScript, Next.js, Axios, Ant Design, Swiper, i18next

Front-End Developer → Baran Software Company https://www.barantm.com

Alborz – Karaj | May 2023 – Apr 2024

- **Developed and maintained various features** across shopping, corporate, and educational sites, as well as user and administrative panels.

Achievements

- Built the front end using **React and JavaScript**, maintained with clean and modular code.

Technologies used

React.js, React Bootstrap, CSS3, Sass, React Router, Axios, Swiper

EDUCATION

IAU – Karaj Branch — Computer Engineering – Software, Master *Sep 2024 – Present*

IAU – Karaj Branch — Computer Engineering, Bachelor *Sep 2018 – 2022*
